

# Counting \$10 notes

Think of all the things that might cost \$10.  
e.g. a delicious family pie, a book, a movie ticket ...

Imagine you had a huge pile of pies, for example, at your Bakery Shop. How much money will you get if you sell them all?

Or imagine you own a bookshop where you have a daily special with lots of books priced at just \$10. At the end of the day you count up all your \$10 notes to see how much money you made.

Or you sold \$10 movie tickets between 1:00 and 3:00 pm and you want to count up how much money you collected in that 2 hour period.

Counting by 10s is quite an easy task. And practice makes perfect. Every day try to find a reason for counting by 10s together until it becomes an automatic skill. You might even try counting backwards by 10s from a given multiple of 10.

Use these \$10 notes to make your counting more realistic. Just photocopy the page as many times as you need, cut out the \$10 notes and store them somewhere handy.

Challenge your students to create their own \$10 note counting activity too. When they do, share your new activity with colleagues so you build up a large repertoire of activities together.

Have fun!
